VINtrack Stolen Vehicle Identification System & Liability Protection

VINtrack is the only stolen vehicle software detection system of its kind.

Just ONE stolen vehicle recovery will pay for the unit many times over. Even if the vehicle is identified by the secondary number, the barcode needs to be decoded to assist in identifying additional stolen vehicles, suspect MO and chop shop operations. Auto thieves have become so sophisticated in their methods of changing a vehicle's identity by VIN-switching, re-tagging or cloning that the best auto theft detectives throughout the country have to rely on VINtrack systems to help identify stolen vehicles.

The *FBI, NICB, US Customs, Auto Theft Task Forces Dealerships and Auction Companies* throughout the world use our systems to help identify stolen vehicles and prevent liability. Hundreds, if not thousands, of vehicles have been recovered with our systems.

Over a million vehicles are stolen in the United States each year worth over 7.5 billion dollars. With a recovery rate of less than 70% that leaves hundreds of thousands of vehicles on our roads at any given time. Stolen Canadian Clone vehicles and Mexican stolen vehicles have also inundated the market. **A quick and simple scan with VINtrack can save your agency hundreds of thousands of dollars in liability issues from unknowingly verifying a VIN as good when in fact it was a clone.**

How does VINtrack work?

Protection is simple with VINtrack. Our systems arrive to you programmed and ready to use out of the box with simple and easy to understand instructions.

Every vehicle inspected should be checked with VINtrack. Our complete packages can include both laser scanning of the barcode and reading the electronic VIN stored in the vehicle's computer; go to www.vintrack.com for more information or call us at (888) 724-2597.

Every vehicle manufactured since 1990 has the VIN in a barcoded format. GM places the VIN on the public VIN plate located beneath the windshield. These can be difficult, if not impossible for some systems to read. VINtrack systems scan these with relative ease compared to most other scanning products on the market.

The VIN may also be stored in the vehicle's on-board computer. Our new enhanced OBD VIN software is capable of locating these VINs and displaying other potential vehicle problems and issues.

VINtrack makes it easy for the user to determine the legitimacy of a vehicle. Once scanned, the VIN is displayed in an easy to read format. Any errors in the VIN are displayed in plain English with audible tones. **VINtrack checks for the 5 most common forms of Re-tagging, VIN-Switching and Cloning.**

VINtrack Software

With each scan the end-user will see a full VIN decode with the *Verified by VINtrack™* check. The VIN decode will display up to 40 fields including those pictured to the left. Additional screens are available to add comments such as vehicle condition and location. Data is easily saved in a text format for easy uploading to mainframe if desired. The PDA comes loaded with VINtrack software and OBD VIN reader.

OBD VIN Software

Our OBD ECU VIN and data reading software is a complete vehicle diagnostics program that also retrieves the Vehicle Identification Number (VIN) and other pertinent data from OBD-II compliant vehicles (1996 and newer SAE J1979). The provided cables allow your VINtrack PDA to plug into the vehicles data link connector located under the steering wheel in most cases. Our newest CAN enabled version will ensure

that it will communicate with the upcoming protocols to be in place by 2008. This system is enhanced for VIN reading of GM, Ford and Chrysler which enables you will get VIN readings when standard OBD tools will not! Any diagnostic trouble codes will also appear to further assist you in stolen vehicle identification and to help avoid buying a lemon.

With one scan, VINtrack instantly checks the following:

- ✓ VINtrack verifies each of the 17 digit VIN numbers to ensure they are correct. If any one of the 17 digits is wrong VINtrack notifies the end user.
- ✓ VINtrack displays a full VIN decode.
- ✓ VINtrack can notify the end user if the wrong format was used.
- ✓ VINtrack will notify the end user in 2 different ways regarding the length of the VIN.
- ✓ VINtrack stores a database of over 70 vehicle models over a 15 year period. This database is the heart of VINtrack in identifying stolen vehicles and clones in over 1000 different ways.
- ✓ VINtrack prompts the user to check for stolens with each scan and identifies clones.

The best auto theft task forces in the world use VINtrack for peace of mind – so should you!

VINtrack recently recovered several H2's, many Escalades, Denali's, Corvettes, Land Rovers, Jeeps, Chryslers and Fords that looked perfect until scanned with VINtrack!

Bender Enterprises Inc. is the sole source distributor of VINtrack.
